Level 3 Qualifications

Summary and course overview

Who are these courses for?

These qualifications are aimed at frontline personnel in safety critical roles through to middle and senior managers of all disciplines already involved in process safety management and continuous improvement in process safety.

How does it work?

Each course is broken down into units, some are mandatory others are optional. Once both Certificates have been successfully completed, candidates then qualify for a Level 3 Diploma.

What types of learning methods are used?

A mixture of presentations, workshops and directed learning.

How will it be assessed?

Progress will be monitored and measured through professional discussion, learner statements, witness statements, questions & answers, observation and work product.

How the Qualifications work together

By successfully completing the Level 3 Certificates in order, delegates acquire the skills and knowledge needed to secure a Level 3 Diploma in Continuous Improvement in Process Safety.

Level 3 Certificate

in Continuous Improvement in Process Safety Fundamentals

Level 3 Certificate

in Applying Continuous Improvement in Process Safety

Level 3 Diploma

in Continuous Improvement in Process Safety

Level 3 Qualifications

Level 3 Certificate in Continuous Improvement in Process Safety Fundamentals

This part of the Level 3 Diploma covers understanding the key factors of process safety management; hazard identification and risk management; process safety culture and commitment; and implementing sustainable improvements in process safety management.

Besides the four mandatory units, participants in the course need to select one optional unit. If your company has more than one entrant, this allows you to gain a wide spread of skills as each person can choose a different option.

Mandatory Units

Unit Name

Understand the key factors of Process Safety Management

Understand Hazard Identification, Risk Assessment and Management of Risk

Understand Process Safety Culture and Commitment
